

Chris Emmanuel Catipay

Web Designer & Automations Specialist

Web designer and automations specialist - I design and build client websites end to end, then wire up the systems behind them: CRM funnels, booking flows and lead routing, so the site keeps working after launch.

Web design UI/UX GoHighLevel Automations Landing pages Brand & graphics Squarespace SEO

Experience · 5+ years

Unreal Productions · Senior Graphics & Web Designer

Remote · 2023 – 2026

- Led graphics and web design across the brand - landing pages, campaign artwork, social and promotional assets - working to a **consistent visual system** rather than one-off files.
- Created **multiple landing pages for productions** - shows, launches and campaigns - each with its own look but built on the same underlying structure, so a new page could go live without starting from zero.
- Built **reusable page sections and design patterns** so new campaigns could be assembled instead of designed from scratch, cutting turnaround on launches.
- Handled responsive behaviour, image optimisation and cross-device QA, so pages held up on mobile where most of the traffic landed.

Revolva Wayfinding · Web Designer

Remote · 2022 – 2025

- Restructured the site on **Squarespace**, reorganising navigation and page hierarchy around the offerings clients actually booked.
- Designed and built the core pages - services, about and booking - to a single visual system consistent with the brand mark.
- Connected enquiry and booking flows to the client's scheduling and email tools, so leads were captured and followed up without manual chasing.

Home Hero Maintenance · Web Developer

Remote · 2021 – 2024

- Built and maintained the company's **lead-generation site**: service pages, location pages and quote-request forms aimed at local search.
- Implemented on-page SEO - structured headings, metadata, page speed and mobile layout - to improve visibility for service-area searches.
- Wired form submissions into the **CRM and notification workflow**, so enquiries were routed to the right person and answered the same day.

Experience · continued

Anique Digital Innovators · Web Developer

Project-based

- Delivered client websites to brief, taking supplied designs and brand assets through to a responsive, working build.
- Worked inside existing brand systems and hand-off requirements, keeping markup clean and documented so the in-house team could maintain it after delivery.
